

For the current focal unit i , with the selected spatial lag step of 1 and an embedding dimension of 3, calculate the embedding vector values:

$$h_{s(1)}(x_i) = (1145 + 749 + 749 + 972 + 625) / 5 = 848$$

$$h_{s(2)}(x_i) = (692 + 688 + 479 + 387 + 430 + 885) / 6 = 593.5$$

$$h_{s(3)}(x_i) = (734 + 698 + 859 + 323 + 225 + 357) / 6 \approx 532.67$$
